# Assignment: ASSIGNMENT 01
# Name: POTHINENI, KALYAN
# Date: 2023-03-22

## Create a numeric vector with the values of 3, 2, 1 using the `c()` function
## Assign the value to a variable named `num_vector`
## Print the vector
num_vector <- c(3, 2, 1)

## Create a character vector with the values of "three", "two", "one" using the `c()` function
## Assign the value to a variable named `char_vector`
## Print the vector
char_vector <- c("three", "two", "one")

## Create a vector called `week1_sleep` representing how many hours slept each night of the week
## Use the values 6.1, 8.8, 7.7, 6.4, 6.2, 6.9, 6.6
week1_sleep <- c(6.1, 8.8, 7.7, 6.4, 6.2, 6.9, 6.6)

## Display the amount of sleep on Tuesday of week 1 by selecting the variable index
week1_sleep[3]
```

```
## [1] 7.7
```

```
## Create a vector called `week1_sleep_weekdays`
## Assign the weekday values using indice slicing
week1_sleep_weekdays <- week1_sleep[1:7]

## Add the total hours slept in week one using the `sum` function
## Assign the value to variable `total_sleep_week1`
total_sleep_week1 <- sum(week1_sleep)

## Create a vector called `week2_sleep` representing how many hours slept each night of the week
## Use the values 7.1, 7.4, 7.9, 6.5, 8.1, 8.2, 8.9
week2_sleep <- c(7.1, 7.4, 7.9, 6.5, 8.1, 8.2, 8.9)

## Add the total hours slept in week two using the sum function
## Assign the value to variable `total_sleep_week2`
total_sleep_week2 <- sum(week2_sleep)
```

```
## Determine if the total sleep in week 1 is less than week 2 by using the < operator
total_sleep_week1 < total_sleep_week2
```

```
## [1] TRUE
```

```
## Calculate the mean hours slept in week 1 using the `mean()` function
mean(week1_sleep)
```

```
## [1] 6.957143
```

```
## Create a vector called `days` containing the days of the week.
```

```
## Start with Sunday and end with Saturday
```

```
days <- c("SUNDAY", "Monday", "Tuesday", "Wednesday", "Thursday", "Friday", "Saturday")
```

```
## Assign the names of each day to `week1_sleep` and `week2_sleep` using the `names` function and `days`
```

```
names(week1_sleep) <- c(days)
```

```
names(week2_sleep) <- c(days)
```

```
## Display the amount of sleep on Tuesday of week 1 by selecting the variable name
week1_sleep["Tuesday"]
```

```
## Tuesday
```

```
##      7.7
```

```
## Create vector called weekdays from the days vector
```

```
weekdays <- days[2:6]
```

```
## Create vector called weekends containing Sunday and Saturday
```

```
weekends <- days[c(1,7)]
```

```
## Calculate the mean about sleep on weekdays for each week
```

```
## Assign the values to weekdays1_mean and weekdays2_mean
```

```
weekdays1_mean <- mean(week1_sleep[weekdays])
```

```
weekdays2_mean <- mean(week2_sleep[weekdays])
```

```
## Using the weekdays1_mean and weekdays2_mean variables,
```

```
## see if weekdays1_mean is greater than weekdays2_mean using the `>` operator
```

```
weekdays1_mean > weekdays2_mean
```

```
## [1] FALSE
```

```
## Determine how many days in week 1 had over 8 hours of sleep using the `>` operator
week1_sleep > 8
```

```
##      SUNDAY      Monday      Tuesday      Wednesday      Thursday      Friday      Saturday
##      FALSE         TRUE         FALSE         FALSE         FALSE         FALSE         FALSE
```

```

## Create a matrix from the following three vectors
student01 <- c(100.0, 87.1)
student02 <- c(77.2, 88.9)
student03 <- c(66.3, 87.9)

##rowname <- c("student01", "student02", "student03")
##colname <- c("assignment01","assignment02")
